

PISA 2018 Analysis

Greece's Educational Performance in Global Context

Michail Theofanopoulos

Athens University of Economics and Business

November 30, 2025

Outline

- 1 Greece's Global Position
- 2 Regional & Continental Comparisons
- 3 Educational Inequality & Social Factors
- 4 Gender Performance Analysis
- 5 Academic vs Global Competence
- 6 Conclusions

Greece in Global Context

Plot 2: Greece in Global Context
Top 10, Bottom 10, and Greece

- Greece ranks #46/80 globally with an overall score of 458, significantly below the global average
- There is a massive 124-point gap between Greece and the top performer (B-S-J-Z China: 582)
- The country is closer to the bottom 10 performers than to the top 10

Where Does Greece Stand Globally?

- Greece's best performance is in Global Competence (#11/29 countries, score 491)
- In academic subjects the ranking is consistently low: #45 in Mathematics and Reading, #47 in Science
- Clear dichotomy: exceptional global competence vs. weak academic performance

Mediterranean & Balkan Regional Comparison

Greece: Mediterranean & Balkan Regional Performance Comparison

PISA 2018 Analysis: Greece in Mediterranean Context

- Greece exceeds the regional average by ~10 points in Global Competence (top regional performer)
- In Mathematics it lags behind the regional average by ~7 points
- Large variation exists within the region (Spain at the top, Albania at the bottom)

Greece vs Continental Averages: Trend Analysis

PISA (kgpm) (200)

- Greece remains consistently below all continents except Africa across all subjects
- The largest gap is with Oceania (~30-40 points) and Europe
- Global Competence performance is the only highlight, approaching the Asian average

Greece vs Continental Averages: Detailed Breakdown

- Detailed breakdown: Greece 454 (Math), 461 (Reading), 454 (Science), 491 (GLCM)
- In all academic subjects Greece falls 20-30 points behind Europe
- Greece's Global Competence score is between Asia and Europe, showing strong soft skills

Educational Inequality Across Countries

- Greece shows large internal inequality with a wide range between percentiles
- Greece's median (458) is close to the global median but with greater dispersion
- Mediterranean countries (Greece, Italy, Spain) exhibit similar inequality patterns

The Equality Test: Family Background Impact

The Equality Test: Does Family Background Determine Success?
Comparison of Top & Bottom Performers

- Greece shows a 64-point difference between students with university-educated parents vs. less educated (ISCED 1)
- It falls in the "inequality zone" below the equality line
- Family background has a stronger impact in Greece than in countries like Estonia or Finland

The Parent Effect: Mother vs Father Education

The Parent Effect - Global Comparison
Whose Education Has Stronger Impact: Mother or Father?

- In Greece, mother's education has a stronger impact (+35 points) vs. father's (+30 points)
- The +5 point difference favoring mothers is greater than the European trend
- Both parental impacts are lower in Greece compared to other continents (Americas: 72-70)

Gender Performance Gap in Mathematics

Gender Performance Gap in Mathematics (PISA 2018)

Top 10 and bottom 10 countries by overall performance - comparing female and male mathematics scores

- Greece is one of the few countries where girls outperform boys in mathematics (+1.5 points)
- Contrasts with top performers (China, Singapore) where boys lead by 3-9 points
- In bottom performers the gender gap favoring boys reaches 13 points (Saudi Arabia)

Gender Gap Distribution Patterns

Gender Gap in Mathematics: Top vs Bottom Performers

Overlapping distributions show male (blue) and female (red) performance - gap value shows M-F difference

- In Greece, male-female distributions almost overlap, with a slight advantage for girls
- Contrasts with bottom performers (Qatar, Saudi Arabia) where there's a massive -15 to -23 point gap
- In top performers (China) boys have a +7.5 point advantage

Gender Performance Across Continents

Gender Performance Across Continents
How Do Greek Women and Men Compare Globally?

- Greek female students (+17 points above males) exceed the global pattern
- Girls lead in all continents, but Greece shows the largest gap
- Overall performance (465 females, 448 males) remains below all continents except Africa

Academic vs Global Competence Landscape

PISA 2018: Academic vs Global Competence Landscape

Circle size represents sample size - Correlation: 0.949 - Greece demonstrates exceptional GLCM performance

- Greece (rank #46 academic, #11 GLCM) is an outlier: low academic but exceptional global competence
- Correlation 0.949 shows that typically academic and GLCM go together, but Greece breaks this pattern
- Located in the "Low Academic, High GLCM - Hidden Strength" quadrant with only 2 other countries (6.9%)

Key Takeaways

- **Global Position:** Greece ranks in the lower half globally (#46/80), but excels in Global Competence (#11/29)
- **Regional Context:** Performance lags behind European averages by 20-30 points in academic subjects
- **Educational Inequality:** Significant impact of family background (64-point gap), with mother's education showing stronger effect
- **Gender Dynamics:** Greece shows a rare reversal with girls outperforming boys (+1.5 in Math, +17 overall)
- **Hidden Strength:** Exceptional global competence despite weak academic scores suggests strong soft skills and cross-cultural awareness

Thank You!
